Note

Reconstruction of the damaged Weir of the Aamattur Inam Tank belonging to the Sri Chamarajeswaraswami Temple at Chamarajanagar

An Estimate for Rs 15953 to repair this tank was first sanctioned in 1891 from the funds of the temple. At the recommendation of the Chief Engineer, the Estimate was since altered to Rs 16794. Again a re-vised Estimate for Rs

(a) Govt Lr no 7738-40 dated 3rd Oct 1891.

(b) Govt Lr no 8761-3 dated 12th Nov 1891.

(2)

Rs 21454 was sanctioned (c) in 1895, and all the repairs were completed in 1897 at an actual cost of Rs 20808.

(c) Govt Pro no 75-7-2 dated 28th July 1895. X

2. Then in 1897 an Estimate for Rs 2025 for turfing the slopes and gravelling the top of the tank bund was received and this too was sanctioned (d) as also a supplemental Estimate therefor in 1898 for Rs 284, the total cost of all the works thus amounting to Rs 23117.

(d) Pro no 691-2 dated 13th Dec 1897 W

2. In May 1899, the Chief Engineer reported (e) that the tank weir breached in November 1898 and submitted a fresh project amounting to Rs 14307 for its re-construction.

(e) In his letter no C 21 dated 15th May 1899 W

The late Mysore Secretary,
in submitting this letter &
the project for orders of
the Dewan, observed in his
"Note" dated 24th July 1899,
as follows:—

"In the Report accompanying
the project, the Executive
Engineer states that
there is no good site for
a waste weir in this tank,
the soil met with becoming
a soft paste in the drains
and that after sinking
a trial pit to a depth of
22 feet below weir level,
it is found that the
soil is the same even
at that depth. The

"Dharmendra Rao of
the temple including
Mrs Amble Annieh
Gandhi doubt the ex-
-pediency of again repairing
the tank at such a heavy
outlay, as considering
the nature of the soil,
the cost of the repairs
may not stop at the present
Estimated amount, but
may go on increasing.
But Mr Mahadevasastry,
the Executive Engineer,
whom I met at Mysore,
a few days back, informed
me that the ryots holding
land under the tank are
anxious to have the weir
restored".

(27) (5)

4. On this note by the Mugrai Secretary, Sir Sheshadri Iyer passed the following order: —

"I am unable to decide the question without further details of the tank and of the work proposed - also the nature of the improvement carried out recently for a total cost of Rs 23,000/- odd the extent of the old (i.e. before recent improvement) and new water-spread, the

(6)

"and level of W. W. old and new - and as now proposed - also extent of irrigation and assessment thereon.

Send this to D. P. W. and on its sending me a note with the above and other details, I shall decide whether to carry out or abandon this project."

5. With reference to the above the Chief Engineer recommended the project (#) of Rs 14 307 together with the Superintending Engr Mr Karve's letter, furnishing the particulars called for by the Dewan. Mr Karve

(#) With his letter no 5633 dated 7th November 1899.

VL

Shastrad

in his letter to the Chief Engineer stated that such a costly weir was not necessary & that it would be sufficient if a new weir is built just outside the washed away one at a cost of Rs 7000.

6 Thereupon the Chief Engineer was asked if he agreed with Mr Karne's and if so, to forward a revised Estimate for that amount (Rs 7000.)

7 In reply the Chief Engineer (g) stated that he did not approve of Mr Karne's proposal to Construct a new weir at the reduced

(g) In his letter no 432 dated 25th January 1900. I

of Rs (7000), as in this design the body wall would be founded on earth filling and ~~is~~ was likely to give trouble in the future.

8 This communication was submitted to the Offg Dewan for orders and he passed[h] the following order :-

"I agree with the Chief Engineer but before passing final orders, ascertain if funds are available".

9. With reference to the above, the Comptroller in his letter no 806 dated 25th June 1901, reported that the balance available at

(h) on 26th January 1900. I

at the credit of the
Channarajeswara Temple
on the 30th June 1900 was
Rs 31588-7-9.

10. In march 1900, the
Dy Comr Mysore District,
submitted for information
of Govt an extract from
the memo of inspection by
the Asst Comr ~~to~~ regarding
the condition of this tank
and stated that he had
directed the Amildar not
to take charge of the tank
till it was put in thorough
order. This letter of the
Comr was also

Sd/ to the Dewan

Orders are solicited whether the estimate for Rs. 14307/- should be sanctioned, the cost being met from Temple Funds.

4/7/07

This is an Inam tank and the Inam is of a Temple - It behoves the Authorities of this Temple to exercise more than ordinary care in spending its funds - The tank is a large one & I have seen it on several occasions The lands below are also valuable & block cotton will mostly - I do not think that the Ryots and land holders are favourable to the abandoning of this source of irrigation altogether - On the other hand to spend money again after what has been spent already without ascertaining the benefit thereby is to be asked upon by a Committee that have no engineer in this Temple with the device of this sort, - My object in saying so much is to request that this action of the Local Engineering Officer has with it sanction the people with that confidence which it ought to have done - The question about the Inam and the cost of work has of course become a matter of difference between the Temple Engineer & the Chief Engineer - My conclusion is certainly to follow the advice of the Chief Engr - and as it is deemed important to maintain this large tank I cannot think the expenditure of 14 30? Rs but in view of the special circumstances of this case would suggest the desirability of the Chief Engr once visiting the work - & forming for his opinion regarding the practicability of the work before it is put to execution It was once said that even at a depth of 22 feet there was good hard soil

Sir,

I to the Dewan.

The first estimate was for Rs 14307 and it was sanctioned in Govt order No 317 – 9 Muzrai dy 26th August 1901. The Chief Engr has now furnished a revised estimate for Rs 17745 and considers that this last estimate is preferable to the other. Mr. Nagarkar inspected the bank in August 1902 and his report is in the file suggesting modifications in the original estimate. The present estimate was prepared by Mr. K. Krishna Iyengar and he says in the report accompanying the estimate that attention has been paid to all the requirements pointed (Flag A.

sub as necessary
in hac sc pg. Eugen Redde?

Submitted.

14. As directed yesterday, I went to the Chief Engrs Office to get the information required that office is closed for the Easter. I consulted the manager who told me that the present Estimate for Rs 17,745 included charges on account of Establishment tools & plant and also on account of the extension of the Weir in accordance with a circular recently issued in the D.P.W. He said it was not possible to put up a comparative statement of the original & the present Estimate which is modified as directed by the Chi. Engr. The Heads of works proposed in the modified project are :—

Training banks.	Rs	2854
Relieving weir or Regulator	"	2312
	"	3564
Channel	"	3421
Weirs 2 × 1829	"	3658
		15809
Compensation		250
		16059 to which shd

which comes up in all to Rs 17,745.

As the matter is urgent & as the Private Secy to H.H. has again called for an early report, I submit that perhaps the ~~case~~ file requires to be submitted early for Dewan's orders. To get the original Estimate sanctd for Rs 14303-, it will take time till the D.P.W. Offices are reopened.

Submitted.

15 The Chief Engr.'s remarks refer to the new Estimate amounting to Rs 17,745/- He foresees that the money spent on the Head works will be a waste because he says the raiyats will never see to their proper maintenance. (Reference is invited to the concluding portion of para 1 of Ch: Engrs letter). But in para 4 of the same letter he says that if the Inamdars guarantee to look after the Head works & the regulation of the supply in the feeder, the project may be sanctd as the best scheme to adopt under the circumstances

[Perhaps the raiyats will have to be called upon to execute Muchalikas binding themselves to conserve the Hd works in good order & see to the regulation of the supply &c in case the present project is sanctioned].

17

for Rs 14307 is not in the Chief Engr's Office - On enquiry 2 boxes have been forwarded to the Executive Engr's Office

2/4/04

note continued

16. As per orders of the Dewan, the Chief Engineer was informed in this Office N° 3058, dated the 7th April 1904, that the Domatur tank, although regarded as Inam, still being under the management of the Amildar of the Chamarajnagar Taluk along with the village of the Sri Chamarajeswaraswami temple, was entitled to the same care and consideration on the part of both the Revenue and the P. W. Depts, as those situated in Govt villages. He was accordingly requested to submit an estimate providing for the proper safety of the tank in future without its being left to the Inamdars or the villagers to look to its up-keep. He was further requested to

in Dasanur belonged and whether any work should be undertaken on their account in connection with the improvement of the tank.

17 In reply, the Chief Engineer submits* a modified estimate for Rs 16,059/- prepared by the Executive Engineer and states that this proposal is the best under the circumstances. He however repeats that the feeder will soon become useless unless the anicut and the feeder channel are properly maintained by the ryots, on whom he says rests this responsibility and not on Govt in the P.W. Deptt as under the rules in force. He further adds that the gardens* situated above the Domatur Tank are Govt lands of the Nanjangud Taluk, and that

* Letter No. 3699, dated 28th June 1904.

* ~~marked~~ ~~green~~ coloured green and numbered in red ink in the plan submitted by the Chief Engineer.

consequently nothing more than the provision already made in the estimate is required for the protection of these gardens and that the garden owners have executed a Muttchilika stating that they have no objection to the improvements of the tank being carried out, and solicits sanction for the present estimate for Rs 16,059/-.

Submitted to His Highness.

The project amounting to ₹16,059 for restoring the Inam Ummathur tank, may be sanctioned from the savings of ₹53,563, available at the credit of Sri Chamarajeswara temple at Chamrajnagar, to which the inam village belongs.

W This tank was repaired at a heavy outlay of more than ₹20,000 in 1897, but unfortunately it breached in November 1898, in about a year after the repairs were completed and ever since, the raiyats holding lands under the tank have been anxious for its restoration. The present project has been prepared by the D.P.W. with much care and after great scrutiny. As a safeguard against any future damage on account of neglect on the part of the raiyats of the village, they will be required to bind themselves to properly maintain the Anikat and feeder channels under the existing Tank Maintenance Rules.

E

The raiyats are under the standing rules entitled to a remission of half of the full wet assessment till the tank is restored and becomes available for irrigation. The remission will be sanctioned in due course.

Muzrai Secretariat. File No. 30 of ~~190~~ 1894

(Note continued) In Govt. Pro: No: 5624 of 3rd August 1904 the project for Rs 16,059 for the repairs of the Inam Ummathur tank was sanctioned. When the work was commenced, 7 certain ryots of the village complained (Petn no 1700 of 28th October 1904) that if the tank is repaired according to the sanctioned project the ~~tank~~ supply to the tank will be diminished &c & put them to a loss. The petition was forwarded to the Chief Engineer for report. & he reports as follows: —

E

F
Letter No 887 dated 6th July 1905

When the tank was improved or restored in 1896-97, the old weirs (one at the left flank & one at the right) were blocked up and bund extended across the big stream at right end to improve the supply by adding the whole drainage area of nearly 8 square miles and a new weir (210 feet long)

Constructed. It was this weir that breached on 14th November 1898 owing to the soil being quite soft and unreliable. The depth of the breach is 23½ feet from the top of bund & 16 feet from the masonry body wall. The ground at breach was tested by a trial pit and driving in a crowbar and no hard ground was met with for a depth of 10 feet. The ryots wish that this weir should be restored but ~~that~~ the site is quite unsuited.

2. The tank prior to restoration used to get a scanty supply from the feeder drawn from the big stream without any regulator and in consequence the valuable cocoanut gardens situated on both sides of the feeder were being inundated and damaged seriously by the deposit of sand during floods.

3. The proposal recently sanctioned is

Muzrai Secretariat. File No. of 190

for Constructing an anekat with a regulator across the big stream and opening out a feeder therefrom to the tank including the re-construction of the old weirs and forming up a training bank to prevent the valuable Cocoanut gardens of Dassanur village from being inundated. The project was prepared after careful inspection of the Site by the Superintending Engineer -

2 - There will be no reduction whatever in the capacity of the tank. It is not possible to restore the breached new weir as prayed for by the ryots and that the supply to the tank is in no way diminished as alleged by them. The Chief Complainants ~~Complaints~~ are presumably those that own lands where the proposed feeder Channel

has to be excavated and those near the left weir and there is no truth in their statements.

The Chief Engineer further reports that the ryots have done nothing in the way of maintaining the bund; since it was restored in 1896-97 and the whole of the bund has badly settled and deep scours formed in the rear slope; the revetment also settled badly in several grades but it may be allowed to stand as it will cost a heavy sum to re-construct with gravel backing. The cost of earth-work and turfing required to bring the bund to its orginal standard, will be Rs 3817 as per Estimate now submitted.

He requests orders of Govt. as to whether this work should be done by ryots or by the P. W. Department.

If the bund is allowed to deteriorate further, it will certainly breach and the large sums of money spent on this tank will be wasted.

MGCPB—3,500—15-10-04.

Muzrai Secretariat. File No. of 190

The complaint petitions which formed the basis for this report have been now received from the P. Chief Engineer & are in the file -

H

I A similar complaint petition from Subbiah & others of Unnamattur village was forwarded from the Jl & Rev secretariat to the Chief Engineer for report. That officer in reply sent a copy of his letter no 887 d/6/2/05 addressed this office for information - That is said in the Department file has been transferred here for disposal. In the Jl & Rev: Secretariat Office note it is said that a report is due to H.H the Maharaja in this case.

Submitted for orders

RS
1/3/05

Muzrai Secretary's remarks :-

The petitioners may be informed

Muzrai Secretariat. File No. of 190

in terms of the Chief Engineer's communication that it is not possible to interfere with the project recently sanctioned which has, after due consideration, been decided upon in the best interests of the raiyats.

On the 2nd point orders are solicited as to whether, under the circumstances of the case, the raiyats should be compelled to do the requisite earth work to the bund at the large cost of Rs 3817. It is not understood why the Deputy Commissioner did not insist upon the raiyats doing the earthwork from time to time. Now the cost and labour have much increased.

Submitted to the Dewan through the II Councillor

K

Docket-no 4551 dated 11th July 1905

Now the Chief Engineer in his O. M. no 4309 dy 29/6/05 submits for sanction an Estimate for Rs 1686 being the cost of Establt., Tools and Plant charges which were not included in the project sanctioned for Rs 16059 for the restoration of the Oomakur tank. submitted

Rs 1577/05

Muzrai Secretary's remarks:-

Orders are solicited on

the payment of the sum of Rs 1686/- to the P W Department being charges at 10 per cent on account of establishment and 1/2 per cent on account of Tools & plant, calculated on the cost of the project. This is a usual charge made by the P.W.D. Department, on works executed by them on behalf of other Departments, and may, it is submitted, be sanctioned.

I beg at the same time to take this opportunity of respectfully representing that the payment of this large percentage over and above the actual cost incurred on the works, operates with hardship on the Mazrai Institutions concerned whose

accumulated savings are made up of small amounts saved year after year from the income from endowments The percentage in question is paid in cash from the funds of the temples, while it is not disbursed to any individuals for work executed, but is taken to the credit of Govt in the P. W. Department. If, under these circumstances, the works executed for the Muzrai institutions are kindly treated as Government works, and the charge for establishment and tools and plant are excused, it would be a great boon to the Muzra Department. I venture to submit the point for

Muzrai Secretariat File No of 190

favourable consideration.

Submitted to the Dewan / thro' the 2nd Councillor — Thanka Saran Rao 23rd July 1905.

Read 24.7.05.

As, this has been a new question for exemption from payment of establishment & Seals & plants charges. It is usual for the D.P.W to include the same with the estimate. If however the Dewan is pleased to make an exception in favour of Muzrai works, it will be an advantage. The amount involved is Rs 1656.

In Govt. Pro: 4049-51 d/ 1st May 1905 certain remarks observations were made by the Dewan Sahib, wherein he remarked " remarking upon the P.W.D for not including the earthwork for the repairs of the bund in the Project sanctioned for the reconstruction of the Iruam oommattur tank. In the present communication, the Chief Engineer states with reference to those observations that (1) the breach was entirely confined to the Weir and had nothing to do with the bund which has been neglected to be maintained by the ryots ever since the tank was restored in 1896-7, & that the breach at the weir was due to the bad site & not to bad work as observed in the Govt. Proceedings.

(2) that as regards the ryots liability to maintain the bund of the tank

E. K

in connection with on page 31 of this note

No 94 d/ 6th January 1906

File No. of 190 Muzrai Secretariat.

It is evident that the maintenance thereof rightly devolves on the ryots as it is not an old breached tank, the bund never having breached either before or after 1896-97; and further that the tank continued to retain water up to the required level and cultivation had gone on under it without interruption from 1896-97, the date of its restoration. The remissions made in 1900-01 & 1904-05 were due to deficient rainfall and consequent deficient supply in the tank. ~~to do the~~

(3) that as the old bund which was restored to a definite standard in 1896-97 has not been maintained by the ryots which is their legimi ta work, the cost of earthwork necessi thereby was rightly excluded from the Estimate for rebuilding the weir

Muz. 8A]

Muzrai Secretariat. File No. of 190

In the light of the explanations offered above, the Chief Engineer requests that Govt will see their way to withdraw the remarks made in the Proceedings under reference that the "deterioration of the bund and the consequent loss of revenue was due to bad work". An estimate for Rs 17000 for restoring the bund, received from the Asst Engr is reported to be submitted for orders } under sanctioning

Rs 17/2/06 in the Ex: Engrs Office and the Chief Engineer says that it will be considered when received.

were made remarking upon the P.W.D for not including this work viz repairs to the bund, in the original Project and it was also remarked in that order that the breach of the tank was due to bad work. on this the chief Engineer offred certain explanations in connexion the P.W dept and requested Govt to withdraw their remarks. On this With reference to this letter the chief Engineer was informed under the orders of the late Dewan that the matter would be taken into consideration when the estimate for restoring the bund was received for sanction. Now in submitting the Estimate for Rs 5359 for this bund work the chief Engineer -

X Vide Pages 37-39 of this note

D This office no 4342 d/ 30/3/06

File No. of 190 Muzrai Secretariat.

adds by way of supplemental explanation that the bund is entirely composed of black cotton soil and no other is available within a reasonable distance, that experience on thousands of tanks has shown that revetments to bunds of tanks composed of such soil (especially those built without gravel backing) always settle in the same way after a few years and that this revetment which was built 9 years ago is no exception to the rule. He further reports that after a few years i.e. 5 or 6 years some further repairs will be necessitated for the same reason & there is no remedy for this, & that it is cheaper to bear the cost of dismantling and resetting the revetment at

MGCPB—2,500—1-8-05.

MGCPB—2,500—1-8-05.

Muzrai Secretariat. | File No. of 190

intervals of 6 years or so than to try and adopt other expensive expedients which would probably end in failure. He adds that the Superintending Engineer will be asked to order the Ex Engineer to personally inspect and report on the causes of the leaks at the sluices, that small holes bored by crabs & fish in this black soil would form leaks which would soon develop to serious dimensions and this is probably the cause. He solicits early sanction

Submitted to the Dewan Saheb

17/5/06

720
18/5/06

Submitted to His Highness.

The Ummathur Inam Tank belonging to the Sri Chamarajanagarswami Temple at Chamraj-nagar was restored in 1897 at a cost of Rs. ~~20,760~~ 22,833. The weir thereof having breached in 1898, estimates amounting in all to Rs.18,598/ have been sanctioned for carrying out the necessary repairs. These estimates provided for constructing an anikat with a regulator, opening out a feeder to the tank, the reconstruction of the old weirs, and forming up training bank to prevent the cocoanut gardens of the Dasanur village from being inundated; but not for earth work.

Paper under Despatch

It is now stated that the works are nearing completion, and that to bring the bund to a standard of safety, the following works costing Rs.5,359 are required--

(1). Bringing earthwork of bund to standard.

(2). Resetting badly settled portions of

revetment.

(3). Raising a right flank bund to same level as main bund. And,

(4). Repairing sluices, which are reported to be leaky.

It is also stated that the nature of the soil requires the dismantling of portions of bund from time to time. The present estimate may accordingly be sanctioned.

The Deputy Commissioner of Mysore will be asked to enforce strictly the liability of raiyats holding lands under the tank to maintain the bund after restoration, while allowing them at the same time to cut and remove the grass growing on the rear slopes of the bund.

No. 5775

MYSORE P. W. DEPARTMENT.
CENTRAL OFFICE,
Bangalore, 23rd November 1894.

From

Colonel C. Bowen.
The Chief Engineer of Mysore,

Bangalore

To

The Chief Secretary to the
Dewan of Mysore —

Sir,

With reference to Government Proceedings No. 7738-40 dated 3rd October 1891, sanctioning Rs 240 from Muzrey Funds, a project for the restoration of the Inam Donathur Tank in Chamrajnagar Taluk, for Rupees 15,953 (altered to Rs. 16,794 as intimated in this Office No. 4757 dated 24th idem), I have the honor to submit, for the sanction of Government, the accompanying Revised estimate of Rs. 21,454 providing for an excess outlay of Rs. 4,660, the necessity for which is fully explained by the Executive Engineer in the Report and Comparative Statement.—

II.— About Rupees 2,000 of the above excess is absorbed by the proposed extension of bund across the Dasanur valley to bring in 8 sqre miles of catchment, instead of restoring 1/2 miles of feeder as originally. For reasons given in para 2

of the Report, the extension of bund must be carried out. The Assistant Chief Engineer, who recently made an inspection of this Tank, considers this the best alter= =native. The omission to provide for it in the first project is due to the careless= =ness of Supervisor Madhava Rao who prepared that project or rather to his having provided a manifestly in= sufficient amount for restoring the feeder, which would have rendered an extension of the bund of Tank itself un= =necessary. The Executive Engineer himself is far from blameless, as he should have verified the statements of the Supervisor=

III.— Early sanction is solicited, the work being in progress, and the Executive Engineer being anxious to complete it within the current official year.—

I have the honor to be,
Sir,
Your most Obedient Servant.

C. Haven Colonel.
Chief Engineer of Mysore.—

Letter eVo 5760 dy

23rd eVr 94 from the

Chief Engineer of Mysore

~~Soliciting~~ Submitting for

~~Sanction~~ Sanction

Sanction a revised estimate

~~for the restoration~~

amounting to Rs 21454/-

~~of Rs 16494/-~~ to complete

the restoration of the afore-

said tank.

Docket eVo 855

dy 20th February 1895

from the Dy Commr,

Mysore District recording

that a sum of Rs 364-5-11
now remains at the credit
of the Chamarajendra Swamy
temple at Chamarajnagar
after deducting the sum
of Rs 16794/- already
sanctioned for the repair
of the tank in the Govt
garden referred above.

Order thereon —

The revised estimate
as submitted amounts
to Rs 21454. The esti-
mate already sanctioned
in the year of 1891 is —
Rs 16794. The excess
of the balance to be
now sanctioned is
Rs 4660/-. The Chief
Engineer states that

V R —

No 757-9 dt 58/12/13
Mysore 30-94 17/3/15
Engg

of this latter amount, about Rs 2000/- is absorbed by the extension of bund across the Sesamur valley to bring in 2 Sq. miles of catchment instead of 1½ miles of feeder as originally, that the extension of bund ~~would~~ was necessary, that the omission to provide for it in the original estimate is due to the concession of supervisor, Madhava Rao who prepared that estimate, and that the ~~Chief~~ Executive Engineer himself is far from blameless, as he should have verified the statements of the Supervisor.

2. The report of the Executive Engineer

Ellapore Divn. Sluices that the original estimate provided a lump sum of Rs. 200/- only for repairing the sluices, that on examination it was found that they required extensive repairs, that one of them (Sluice No 2) was found so bad that nearly the whole of it had to be done afresh, and that the execution of the aforesaid additional works necessitated an excess ~~expenditure~~ outlay of ~ Rs. 4660/-.

3 Under the foregoing circumstances, the excess outlay of Rs. 4660/- is sanctioned, the charge being met from the sources

Specified below:—

3364 5 11 — From the amount available at the credit of the Chamarajeswara Swamy temple.

1295-10-1
Rural 4660-0-0 From the future collections of the Kurru villages attached to the said temple.

4. The Comptroller to the Govt of Mysore will arrange for the needful transfer of this account to the Public Works Dept.

Secretary

Sir,

I have the honor to forward the accompanying project, amounting to Rs 14,307, for reconstructing the damaged weir of Oomattur Main Tank, Reg No 27, Chamarajanuggar Taluk, also for resetting the revetment in a few places in the bund, and to request that you will be so good as to obtain early sanction of Government thereto. The report attached to the estimate explains the necessity for the work provided for.

II. As it is desirable to have the work completed before the next rains, the Superintending Engineer, Western Circle, has, in anticipation of sanction, ordered the collection of materials.—

III. The Deputy Commissioner's countersignature to this project should have been obtained by the Executive Engineer, as usual, but it is considered inadvisable to delay the work on this account. The Executive Engineer will be directed to supply the omission as soon as the project goes back to him for execution.

I have the honor to be,
Sir,
Your most obed.t Servt.

With the sanctioned bill.

[signature]
Asst Secretary

Note by the Mysore Secy

Letter no 21 Dy 15th May 1899, from the Chief Engineer of Mysore, submitting for sanction a project amounting to Rs 14,307 for reconstructing the damaged weir of the Domattur Drain Tank belonging to the Sri Chamarajeeswara Swami temple at Chamarajnager.

An estimate for Rs 16,794 to repair this tank was first sanctioned in 1891 from the funds of

the temple. Again a revised estimate for Rs 21,454 was sanctioned in 1895 and all the repairs were completed in 1897 at an actual cost of Rs 20,800.

Then in 1897 an estimate for Rs 2025 for turfing the slopes and gravelling the top of the tank bund was received and this too was sanctioned as also a supplemental estimate therefor in 1898 for Rs 284, the total cost of all the works thus amounting to Rs 23,117.

Now the chief

Engineer reports that tank weir breached in November last and submits a fresh project amounting to Rs 14,307 for its re-construction. In the report (herewith submitted) accompanying the project, the Executive Engineer ~~says~~ states that there is no good site for a waste weir in this tank, the soil met with becoming a soft paste in the rains and that after sinking a trial pit to a depth of 22 feet below weir level, it is found that the soil is the same even at that depth. The Dharmakarsis of the temple including Mr. Amble Amiah Pandit doubt the expediency of again repairing the tank at

such a heavy outlay as considering the nature of the soil, the cost of the repairs may not stop at the present estimated amount, but may go on increasing. But Mr. Mahadeva Sastriar, the Executive Engineer, whom I met at Mysore, a few days back, informed me that the ryots holding land under the tank are anxious to have the weir restored. The Chief Engineer's letter together with the project and other enclosures are herewith submitted for orders.

There is now a sum of Rs. 32643-4-9 at the credit of the temple.

(Signed) A. Srinivasacharlu.

21-7-99.

I am unable to decide the question without further details of the tank and of the work proposed - also the nature of the improvement carried out recently for a total cost of Rs. 23,000/- odd - the extent of the old (i.e. before recent improvement) and new water spread, the length and level of W. W. old and new - and as now proposed Also extent of irrigation and assessment thereon.

Send this to D.P.W. and on its sending me a note with the above and other details, I shall decide whether to carry out or abandon this project

To

The Chief Engineer
of Mysore

Sir,

With reference to your letter No 5633 dated 7th November 1899 forwarding an Extract from the Superintending Engineer Mr. Karve's letter No 4417 of 30th October 1899 in the matter of the Re-construction of the damaged weir of the tank in the inam village of Immattur belonging to the Sri Chamarajeswara Swami temple at Chamarajnagar I am desired by the Offg Dewan to enquire if you agree with Mr. Karve

in considering that
instead of the costly
weir provided for in
the original project
for Rs 14,307-, it is sufficient
to construct a new
weir just outside
the washed away one
at a cost of Rs 7000-
and if the section described
in his letter, and if so,
to request that a revised
Estimate for that amount
may accordingly be
prepared and forwarded
to this Office for the orders
of Govt. in the Musrai
Department.

2. The Plan and
the Project for Rs 14,307-

CENTRAL OFFICE,

No. 432

Bangalore. 25th January ~~189~~ 1900

From

The Chief Engineer of Mysore,
Bangalore.

To

The Secretary to Government
Muzrai Department.

SIR,

In reply to your letter etc 788/Muz.
F. 30-94 of the 22? instant, enquiring if I
agree with Mr. Lawrie in considering that,
instead of the costly weir provided for in
the original project of Rs 14,307, for restoring
Incam Ummattur Tank, Regd: No: 27 of
Chamrajnagar Taluk, it is sufficient to
construct a new weir just outside the
away one at a cost of Rs 7,000, I have
the honor to inform you that I do not
approve of Mr. Lawrie's proposal to con-
struct a new weir at the reduced cost
of Rs 7,000, as in this design the body
would be founded on earth

is likely to give trouble in the future.
The provision of Rs 19,280 for the recon-
-struction of the washed away well,
as designed by Mr. Whiteley, was
therefore allowed to stand in the original
project for this Tank, as this will
prove the cheaper arrangement in the
long run.

II It is to be regretted that the above
was not mentioned in this office No:
5633 of 7. November 199, when resubmitting
the project.

III Enclosures are returned.

Submitted to the Dewan for perusal

2-4/1900

Has the honor to submit for information the accompanying extract from the memo of inspection by the Divisional Commissioner during the fortnight ending 31st January 1900, regarding the condition of the Ummattoor Tank in the Channarayapatna Taluk, and to state that the Amildar has been directed not to take charge of the tank till it is put in thorough order.

for Deputy Commissioner

Extract from the memo of inspection by the First Assistant Commissioner, Mysore District, during the fortnight ending 31st January 1900.

× × ×

Inspected the very big tank the bund of which from one end to the other is nearly 2 miles. The tank, I am told, was improved 2 years ago at a cost of Rs. 22,000/- and last year the waste weir breached. I went over the bund in which there are cracks or fissures very deep and as wide as a span in some places.

The Revenue Department has been asked to take charge of the Department. In course of time the stone facing of the bank has collapsed.

The 2 sluices are not right as the thickness that through sluggard, water escapes in the sluices.

In the present condition of the tank, it is advisable for the Revenue Department to take charge of it.

Correspondence ending with letter No. 432 dated 25th January 1900, from the Chief Engineer of Mysore requesting sanction to the revised project for Rs 14,307/- for the restoration of the Inam Unnamattur Tank belonging to the Sri Chamarajeswaraswami temple at Chamarajnagar.

Order thereon.

No. 317-9 Dy 26th August 1901
Inm. F 30-94

The Unnamattur Tank referred to in the letter read above is an Inam tank and the Inam belongs to the Sri Chamarajeswaraswami temple at Chamarajnagar.

It behoves the Govt. who are the trustees of this temple to exercise more than ordinary care in spending its funds. The tank is a large one and the lands below it are also valuable being black cotton soil mostly. The Govt. do not think that the Raiyats & land-holders are favorable to the abandoning of this source of irrigation altogether. On the other hand to spend money again after what has been spent already without retaining the benefit thereof, is looked upon by all those that have any interest in the

temple with diffidence and distrust. The object of the foregoing remarks ~~of Govt in Carrying &c much~~ is to point out that the action of the local Engineering Officers has not inspired the people with that confidence which it ought to have done. The question about the position & the cost of Weir has again become a matter of difference of opinion between the Superintending Engr & the Chief Engr. The inclination of Govt is certainly to follow the advice of the Chief Engr, and as it is deemed important to maintain this large tank

the expenditure of Rs 14, —
~~will be~~ is

But

in View of the special circs of the case, the Govt suggest the desirability of the Chief Engr once inspecting the work and forming his opinion regarding its suitability ~~of the work~~ before it is put into execution.

It was once said that even at a depth of 22 feet there was no good hard soil for foundation.

the charge being debited to the S of Rs 31,588-7-9 as at the credit Sri Chamaraj temple on 30th 1900, as the Comptr is arrange for the transfer of this amount to the

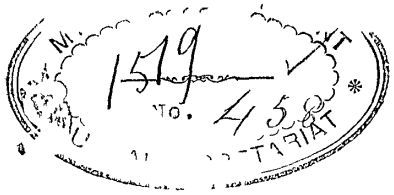
Enclosure No. 1

Submitted for information

Sec 1/5/03

Secretary's further report 1/5/03



Mysore Public Works Department,
Central Office,
Dated Bangalore 22nd January 19..

From,

W. C. Hutchin Esquire, A.M.I.C.E.,
Chief Engineer of Mysore.

To,

L. Ananthasawmy Rao Esquire, B.A.,
Deputy Secretary to Government of Mysore
in the
Revenue and Agriculture Department.

Sir,

In continuation of this Office No.2005 of 4th April last, I have the honor to forward for orders of Government the accompanying plan and estimate amounting to Rs.17,745 including Establishment and Tools and Plant charges for restoring the Tank Oomathur Tank, Belur Taluk. Vide para 27 of the Engineer's Report, I beg to observe that the point which strikes me most in that the proposed Head works and channel and training works are certain to go to ruin in a very few years. The ryots of Oomathur will never see to their necessary upkeep nor to the proper regulation of the supply to the feeder, and I foresee that in a few years, the money (Rs.18,000) spent on these Head works may be all thrown away.

2. It is no where stated to whom whether to Government or to the Oomathur Inamdars the valuable cocoanut gardens and lands at the Dasarur village, alluded to in the report and in Mr. Nagarkar's Inspection Note, belong. Some of the works proposed are designed to serve as a protection to these gardens and are not a legitimate charge against Oomathur tank itself.

3. I am still of opinion that it would be better in the end to adhere to the new extension of the bund with an extensive weir in suitable design than to go in for all the complicated accessories and feeder proposed, unless there is someone placed in charge to look after the works.

4. If the Inamdars guarrantee to look after the Head works and

and the regulation of the supply, the project may be sanctioned as the best scheme to adopt under the circumstances.

I have the honor to be,

Sir,

Your most obedient servant.

Dewan's orders

To the Chief Engineer

Sir

With reference to
Your letter No 4578 of the 22nd
January 1904 forwarding
forwarding an estimate
for Rs 17745 for restoring
the Swami Vamathur
Tank, I am directed
to inform You that the
tank although reported
as being in a
bund shall is under the
management of the Amildar
of Chamrajnagar along
with the village, the revenues
of which belong to the
temple at Chamrajnagar.
The tank is therefore
entitled to the same
care and consideration
on the part of the both

the Revenue and ~~of~~ Public
Works departments
as banks in Govt villages.
In these circumstances,
I am to request that
you will be good enough
to send up for the orders
of Govt an estimate
to provide for the
further safety of the
bank in the future
without its being left
to the ~~six~~ inamdars or
the villagers to look
to its upkeep, ~~possibly~~
~~to the~~ ~~to~~ ~~to~~ ~~to

No 3058 &

Chief Engineer of Mysore.

To,

L.Anantasami Row Esquire,B.A.,

Secretary to the Government

of H.H.the Maharajah of Mysore,

Muzrai Department .

Sir,

Adverting to your No.1813 of 24th November last,forwarding petition from Basavegowda and other ryots of Ummathur complaining against the proposed diversion of the feeder channel to their village tank and calling for a report on the allegations therein contained &c;I have the honor to forward copy of Mysore Division, Executive Engineer's letter No.62 of the 16th ultimo(with the tracing) reporting that there is no truth in the allegations made and to point out that since the restoration of the Ummathur Tank in 1896-97,the maintenance work by the ryots has been so much neglected that it would take about Rs.5,800 (as per detailed estimate attached) to bring the bund up to its original formation.I therefore request that you will be good enough to obtain the early orders of Government as to whether this work should be done by ryots or by the P.W.Department;as if the bund is allowed to deteriorate further,it will certainly breach and the large sums of money spent on this tank will be wasted.

11.The tracing may be obligingly returned.

I have the honor to be,

Sir,

Your most obedient servant,

W. McHutchin

Enc: 3
1. Tracing
1. Estimate
1. Letter copy

Letter No. 62 dated 16th January 1905 from the Executive Engineer Mysore Division to the Superintending Engineer Western Circle

With reference to your No. 5104 of 3rd Nov. 1902, forwarding for report copy of letter No. 1813 of 20th October 1902, regarding the complaint of ryots of Vennathur, Chamarajnagar Taluk, I have the honor to report that I inspected the vennathur tank, Registered No. 270 the 12th ultimo, a sketch plan showing the position of the tank, as it stood prior to restoration, the improvements already carried out and the works now sanctioned to be done, is herewith submitted for your kind perusal.

2. It will be seen from the sketch that, when the tank was improved or restored in 1896-97, the old sluices, one at the left flank and one at the right flank, were blocked up and bund extended across the big stream at right end to improve the supply by adding the whole drainage area of nearly 8

Ignore

Refer notes on the new weir 210 feet long constructed in 1911 over the weir that breached in 14. 11 98 owing to the soil being quite soft and unreliable.

The depth of the second breach is 23½ feet from the bed round and 16 feet from the masonry body wall. The ground at breach was tested by excavating a trial pit and driving in a crowbar and no hard ground was met with for a depth of 10 feet. The ryots wish that the weir should be restored, but that the pits be quite unwalled

3. The tank prior to restoration, used to get a scanty supply from the feeder drawn from the big stream, without any regulator and in consequence the valuable cocoanut gardens, situated on both sides of the feeder were being inundated, and damaged seriously by the deposit of sand during floods.

4. The proposal recently sanctioned is for construction in masonry with a regulator across the big stream at E marked in the sketch and opening into a feeder thereon to the tank including the reconstruction of the old weir and forming up a training bank above the line F E to prevent the valuable cocoanut gardens

4. Nawanna village will be inundated if the proposed raised road is constructed in accordance with the instructions of the Inhambane District Engineer after inspection of the site

5. There will be no reduction in the capacity of the tank and the proposed road mentioned are in the undersigned's humble opinion, as far as can be ascertained taking into consideration the site and soil.

6. It will thus be seen that it is not possible to provide the breaches now sought for by the ryots and that the supply to the tank is in no way diminished as alleged by them. The shareholders are presumably those that own land where the proposed feeder channel has to be excavated and those near the left weir and there is no truth in their statements

7. The enclosures received with the district under reply, are returned herewith.

8. In this connection, I beg to bring to your kind notice that the ryots have done nothing in the way of maintaining the bund, since it was restored in 1896-97 & the whole of the bund has badly settled and does

Leaves gone out in the foreshore. The parliament also
settled hardly in several grades but it may be allowed
that land is sold at heavy prices to persons who
in the way of trading with cast of earth-work and laying
it in mud to form the bound to its original standard, will
be the only person who has furnished with the accompanying
plan in which harbour proposed by the Assistant
Engineer in exchange of the Vanguard Range and gives
for a certain improvement

With reference to
above the
Engineer
that the
inspected

on the 13th January 1905,
that the restoration
of the breached weir
as proposed for by the
reports is not possible
as the site is quite
unsuited for the purpose;
that there
will be no reduction
whatever in the capacity
of the tank if works
as alleged
are carried out
according to the
sanctioned project;
and that there is
no truth in the allegations
contained made by
the petitioners. In
the circumstances
the Govt declines to
order the feeder drawn
on the big stream
without any regulator and
in consequence valuable
coconut gardens situated
on both sides the feeder
were being inundated &
damaged seriously by the
deposit of sand during
floods. The proposal
recently mooted to
construct an anicut
with a regulator across the
big stream and opening
out a feeder therefrom to the
tank including the
re-construction of the old weir
and erecting up a training
bund to protect the
valuable coconut gardens
of petitioners from
encroachment. There
would be no increase whatever
in the capacity of the tank.
It is not possible to
restore the breached weir
as prayed for by the
petitioners

Press 21, 1 a.

The Chief Complainants are presumably those that own lands where the proposed feeder Channel has to be excavated. The project was prepared after careful inspection of the site by the Superintending Engineer - that the rysts have done nothing in the way of maintaining the bund since it was restored in 1896-97; but the whole of the bund has badly settled, and deep scours formed in the rear slope; the cost of earth work and turfing required to bring the bund to its original formation will be Rs 3817 as per Estimate now submitted. The subjects orders as to whether this work should be done by or by the P. W. Department and is allowed

project recently sanctioned, which was, after due consideration, decided upon in the best interests of the ryots. The petitioners will be informed accordingly. The other points noted in the Bund Engineer's report.

to deteriorate any longer, it will continue towards. On this point the Govt observe that the damage done to the bund was subsequent to the restoration of the bunds. It cannot therefore be said that the tank breached on account of the ryots neglecting to maintain it. On the contrary it is due to hard work, and the Ryots cannot be expected to maintain the bund of a languished tank and working tanks

Under the above circumstances the petitioner will be informed that the is not possible to interfere with the project recently sanctioned which has after due consideration been decided upon in the best interests of the raiyats -

As regards the liability of the Ryots to repair & maintain the bund ~~the Govt observe that~~ ~~in doing their~~ ~~work for is a dirty work~~ ~~to impress~~. Any one concerned with this Tank work cannot escape the discredit following bad execution. The project for the present construction must also include the earthwork. The ~~Asst Engr~~ ~~Office who prepared the Estimate Project~~ cannot former of the Estimate be

Read:-

Govt: Pro: no 562-4 dated 3rd August 1904, sanctioning the project of Rs 16059/- for re-pairing the Iruvathur tank belonging to the Sri Thavarajeswaraswami temple at Thavarajapura

Petitions nos 1700, & 2467 dated 28th October and 25th December 1904, respectively, from Basavegowda and some other ryots of Iruvathur complaining against the proposed

freedom channel to their
village tank.

Correspondence
relating to the Docket
No 1229/1 dated 22nd
February 1905 from the Chief Engineer & Surveyor,
representing on the above-
mentioned petition
& order thereon No 4049-51 Dy 1.5.05.
Mar. D. 30-94

The chief complaint
of the petitioners is
that of the tank is
supplied according
to the directions of the
the supply to the tank
would be diminished.
They therefore pray that
the breached new weir
be restored instead
of constructing an
entirely a

regulator across the big stream and opening out a feeder therefrom to the tank. With reference to the above, the Chief Engineer reports that the Superintending Engineer ~~reports that the Superintending Engineer~~ inspected the tank on the 13th January 1905, that the restoration of the breached weir as prayed for by the ryots is not possible, as the site is quite un-suited for the purpose; that there will be no reduction whatever in the capacity of the

lack as alleged, if
works are carried out
according to the sanc-
tioned project, and
that there is no truth
in the allegations made
by the petitioners. In
these circumstances
the Government decline
to reconsider
the project recently
sanctioned, which
was after due considera-
tion, decided upon
in the best interests
of the people. The petitioners
will be informed accordingly.

The other point noted
in the Chief Engineers'
report is that the
people have done nothing
by way of maintaining

was restored in 1896-7; that the whole of the bund has badly settled and deep scours formed in the rear slope and that the cost of earth work and turfing required to bring the bund to its original for-mation, will be Rs 3817, as per estimate now submitted He solicits orders as to whether this work should be done by the ryots or by the P.W Department and states further that if the bund is allowed to deteriorate any longer, it will

(On this point the Govt
observe that the damage
done to the bund was
subsequent to the restoration
of the breach. It
cannot therefore be
said that the tank
breached on account
of the ryots neglecting
to maintain it. On
the contrary, it is due
to bad work, and the
ryots cannot be expected
to maintain the bund
of a breached tank.
Any one concerned
with this tank work
cannot escape the
discredit following
bad execution. The
project for the present
construction must
the

earth work. The framer ~~former~~ of the estimate cannot be acquitted of blame for not including the earth work in it and asking for orders about the source of the funds required. It is such omissions and the execution of badly prepared designs that cause annoyance to Royots. If the work as per estimate without any additional earth work to the bund as now brought to notice had been carried out, the result would have been disastrous to the bund as the

and

the source of supply
have been greatly
increased. The P.W.D.
Officer responsible
is liable to be censured
unless he has an
explanation to offer.

Proceedings of the Government of H.H.the Maharaja of Mysore.

M U Z R A I.

Read:-

Government Proceedings No. 562-4 dated 3rd August 1904 sanctioning the project for Rs, 10050/- for repairing the Inam Ummattur tank belonging to the Sri Chamarajeswaraswami temple at Chamarajnagar.

Petitions No. 1700 and 2107 dated 28th October 1904 and 28th December 1904 respectively, from Basave Gowda and some other ryots of Ummattur complaining against the proposed diversion of the feeder channel to their village tank.

And,

Correspondence ending with Secret No. 1271 dated 22nd February 1905 from the Chief Engineer of Mysore reporting on the above.

Order thereon No. 4049-57 Secret Register, dated 1st May 1905.
Muz.F30-94

The chief complaint of the petitioners is that if the tank is repaired according to the sanctioned project the supply to the tank would be diminished. They therefore pray that the breached new weir be restored instead of constructing an escape & the regulator proposed in the main stream and opening out a feeder therefrom to the tank. With reference to the above the Chief Engineer reports that the Superintending Engineer who inspected the tank on the 17th January 1905 that the restoration of the breached weir as prayed for by the ryots is not possible as the site is quite unsuited for the purpose; that there will be no reduction whatever in the capacity of the tank as alleged if works are carried out according to the sanctioned project; and that there is no truth in the allegations made by the petitioners. In these circumstances the Government decline to reconsider the project recently sanctioned, which was, after due consideration, decided upon in the best interests of the Raiyats. The petitioners will be informed accordingly.

The other point noted in the Chief Engineer's report

is that the ryots have done nothing in the way of maintaining the bund since it was restored in 1896-97; that the whole of the bund has badly settled and deep scours formed in the rear slope and that the cost of earth work and turfing required to bring the bund to its original formation will be Rs. 3816 as per estimate now submitted. He solicits orders as to whether this work should be done by the ryots or by the Public Works Department and states further that if the bund is allowed to deteriorate any longer, it will certainly breach. On this point the Government observe that the damage done to the bund was subsequent to the restoration of the breach. It cannot therefore be said that the tank breached on account of the ryots neglecting to maintain it. On the contrary it is due to bad work and the ryots cannot be expected to maintain the bund of a breached tank. Any one concerned with this tank work cannot escape the discredit following bad execution. The project for the present construction must also include the earth-work. The framer of the estimate cannot be acquitted of blame for not including the earth-work in it and asking for orders about the source of the funds required It is such omissions and the execution of badly prepared designs that cause annoyance to Raiyats. If the work as per estimate without any additional Earth work to the bund as now brought to notice had been carried out, the result would have been disastrous to the bund as the catchment and the source of supply have been greatly increas-

Mysore Public Works Department,

No. 94 M/2 Central Office,

Dated Bangalore 6th January 1906.

From,

W.Mc Hutchin Esquire, M.I.C.E.,

Chief Engineer of Mysore.

To,

L.Anantasami Rao Esquire, B.A.,

Secretary to the Government

of H.H.the Maharajah of Mysore,

Muzrai Department.

Sir,

Adverting to Government Proceedings No.4049-51/Muz F.30-94 of the 1st May 1905, passing orders on the petitions of some of the ryots of Ummathur, complaining against the proposed diver--sion of the feeder channels to their village tank in the Chama--rajnagar Taluk, and animadverting adversely upon the work done to the tank at the time of its restoration in 1896-7; I have the honor to forward the enclosed copy of Mysore Division Executive Engineer's No.780, of the 20th November last, together with a copy of the Revenue Statement therewith received; and to submit the following replies to the observations made in the Proceedings quoted above:-

(1) The breach referred to was entirely confined to the weir, and I am not aware of any particular damage to, or deterioration of the work done to the bund except--ing that due to the absolute neglect of the ryots to maintain it from the time it was restored in 1896-7. Moreover: the breach was entirely due to the bad site for the weir, but there was no alternative but to adopt this site, as no better one was available. It was not due to the bad work carried out by the Department, as observed in the Proceedings under reference, that the tank breached; and to have built a masonry O.G.weir

at

at this site would have cost 3 times what the work cost.

(2) As regards the ryots liability to maintain the bund of the tank, it is evident that the maintenance in this case rightly devolves on the ryots; as it is not an old breached tank, the bund never having breached since 1896-97. It will be further seen that the tank continued to retain water upto the required level, and cultivation had gone on under it without interruption from 1896-97, the date of its restoration; as is evidenced by the revenue statement obtained from the Amildar. Such remissions as have been made in 1900-01 and 1904-05 were due simply to deficient rainfall and consequent deficient supply in the tank. The ryots have entirely neglected to maintain the bund for which there is no excuse whatever, and they should be compelled to do so under the existing rules.

(3) As the old bund which was restored to a definite standard in 1896-97 has not been maintained by the ryots, which is their legitimate work, the cost of earthwork necessitated thereby was rightly excluded from the estimate for rebuilding the weir &c. In the light of these explanations, I trust the Government will see their way to withdraw the remarks made in the Proceedings under reference, that the deterioration of the bund and the consequent loss of revenue was due to bad work."

II. The estimate of Rs.17,000/- for restoring the bund to standard said to be under scrutiny in the Executive Engineer's Office will be considered when received.

I have the honor to be,

Sir,

Your most obedient servant,

M. Visvesvaraya

Chief Engineer of Mysore.

Docket No.780 dated 20th November 1905, from the Executive Engineer, Mysore Division, to the Superintending Engineer, Western Circle.

Superintending Engineer's No.2236 of 28th May 1905, calls for certain information regarding the ryots' liability for maintenance of Inam Umathur Tank in the Chamarajnagar Taluk after it was breached.

With reference to the above, has the honor to report as follows:-

2. The tank breached on 14th November 1898, at the weir for a length of 78 feet. A ring bund was immediately put across the gap to retain water that remained in the tank. The tank received further supply from subsequent rains and the crop below did not suffer for want of water. Temporary works costing Rs.503 were also carried out to retain water in the tank till the breach could be restored and these works are still in existence. There was therefore, no difficulty for the tank to retain the water to R.L.51.00.

3. As regards cultivation under the tank, the copy of the revenue statement received from the Amildar with his No.22 of 12th July 1905 is submitted herewith and it will be seen therefrom, that commencing from the year 1898-1899, full revenue is realized every year, except during 1900-01 in which half the assessment is stated by the Amildar to have been remitted owing to the tank not having received water. It is clear from this that there was cultivation throughout, every year, except during 1900-01, probably on account of want of timely rains.

4. The bund was not maintained by the ryots. From the enclosed statement of the ryots received from the Assistant Engineer, Nanjungud Range, (translation put up) it will be seen [illegible] they wilfully neglected to maintain the bund for the [illegible]n that they are not allowed the right of removing grass [illegible] on the slopes of bund, which is sold annually by the

the Revenue Department for sums ranging from Rs.25 to 59 and they agree to do the maintenance work, if this privilege is allowed them. This is, however, a question for the Revenue Department.

5. An estimate for about Rs.17,000 for restoring the bund to a standard of safety received from the Assistant Engineer is under scrutiny. This estimate will be completed and submitted for orders shortly.

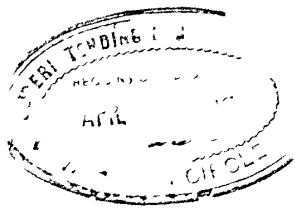
For Chief Engineer of Region

WHS



Report to accompany the estimate of the probable cost of bringing the Kumaraswamy Tank to the state of repair.

Reference Superintendent of Engineers letter No 2881 of 22-5-1929 submitting the estimate and report for the above work

---

Report

The Kumaraswamy Tank at Chinnamajanagam which was restored in 1877-78 at a cost of Rs [illegible] bore the Weir of 4 miles length on Excavation across the old bund were temporarily repaired and water stored for cultivation. The ryots having neglected to maintain the bund, deterioration has taken place and the accompanying estimate provides for bringing the bund to the

the condition in which it was after restoration. The estimate also provides for recovering and resetting the badly settled portions of the revetment. An estimate was prepared providing for rebuilding the whole of the revetment of the flank but in my opinion it seems sufficient if only the badly settled portions which are generally about the weir level, are reset, leaving the other portions as they are. The estimate also provides for raising the right flank bund of right weir, to the sanctioned level of the bund, as otherwise the present low flank bund which is below 52.00 (please see sections enclosed) is likely to be covered.

Provision is also made for repairing the sluices which are reported to be leaky. Since the earth available here is black cotton soil, provision is made for gravel backing behind revetment very necessary

Gazetting?

revetment and paving the top of the bund.

The amount of the Estimate is thus made up of Rs 3409 for resetting the revetment paving plant bund & not forming repair work and Rs 1373 due to making good the deterioration of the bund from neglect of the maintenance work.

Since there is already an estimate sanctioned providing for opening out feeder Channels &c to this tank for Rs 16059 (and work on which is in progress) the enclosed estimate for Rs 4774 may be treated as supplemental to the estimate amounting to Rs 16,059.

Sir,

With reference to the correspondence ending with your letter No.4342 dated the 30th March last, I have the honor to forward for the sanction of Government the accompanying estimate amounting to Rs.5,359 for building up the bund of the New Ummatur Tank in the Chamrajnagar Taluk to a standard of feet together with Captain W.G.Traill's Inspection Note which explains the various items. The items of work provided for in this estimate are in addition to those covered by the revised estimate submitted with my letter No.2889 of the 1st instant, and may be treated as supplemental thereto.

2. It is true that the breaching of the weir was not due to bad work when the tank was restored as already observed by me: but it would appear that the revetment which was built in accordance with Colonel Bowen's old specification has settled considerably, so much ~~as~~ that it must be rebuilt now for the worst portions from the top to just below weir level. The bund is entirely composed of black cotton soil and no other is available here within a reasonable distance. Experience on hundreds as I might say, thousands, of tanks has shown that revetments to bunds of tanks composed of such soil, especially those built in accordance with the old specifications i-c without gravel backing, always settle in the same way after a few years; and this revetment which was built 9 years ago is no exception to the rule.

It is certain that after a few years-5 or 6- some further repairs will be necessitated for the same reason; and no remedy for this state of affairs can be proposed at a reasonable cost i-e it is cheaper to bear the cost of dismantling and resetting the revetment at some intervals say 6 years or so than to try and adopt other expensive expedients which would probably end in failure.

3. The Superintending Engineer will be asked to order the Executive Engineer to personally inspect and report on the causes of the leaks at the sluices. Small holes bored by crabs and fish in this black soil would form leaks which develop to serious dimensions, and this is probably the cause.

4. It is desirable that the works should be ~~XXX~~ finished this year if possible. Full allotment may therefore be made.

I have the honor to be,

Sir,

Your most obedient servants

Bernard Dawes

Asst. Engr.

~~XXXX~~ For Chief Engineer of Mysore

Note by Captain W S Traill R E, Superintending Engineer, Western Circle, on Iruan Ummathur Tank.

Work on estimate of Rs 16,059 sanctioned in Govt: Progs. no 562-4 dated 1st August 04, and supplemental estimate covering establishments tools and Plant sanctioned in no. 1904-06 dated 24th August 1905 is nearly completed. I inspected the tank on 7th instant and noted various works which appear to me to be necessary for the safety of the tank and to the working of the improvements now nearing completion.

On going through the file I find that for these works have already been noted viz: those pertaining to the safety of the tank include bringing earthwork to standard and repairing revetment. Govt. Progs no 4049-57 dated 1 May 05 deals at some length with the question of maintenance and repts' liability and from these orders it appears that because the tank did not breach on account of repts' neglig Government consider there is no liability against the repts ~~and~~ until the tank is restored again quite overlooking the fact that full repairs has been recovered and therefore presumably cultivation has proceeded ever the tank breached except in 19

Prior to my inspection the Executive Engineer M-B. SubbaRao inspected it and submitted an Estimate for works he considered necessary as supplemental to those already sanctioned; this Estimate only reached me in camp today and I find it covers exactly the same works as I noted on my Inspection to be necessary. These are

(1) Bringing earth work of bund to Standard
(2) Revetting badly damaged portions of revetment
(3) raising a right flank bund to same level as main bund
(4) Repairing Sluices.

No 1. I consider to be entirely due to pyots' agency and its cost is Rs 1,373; it will be seen from this office no: 5549 dated 28-11-05 that the pyots admit the neglect and give as a reason not absence of liability but the refusal of a pyot to cut grass on the bund as the bund is black cotton soil and practically devoid of turf or grass this reason appears absurd however it is a matter for the revenue Department and Government to decide.

No 2. It is reported that it was necessary to rebuild the whole revetments; no doubt this would be a good thing as it looks as if it had been badly done originally but I agree with the Executive Engineer that it is not absolutely necessary for the safety of the bund

the weirs or flanks will always go I think before the bund itself gives way.

No. 3 I cannot imagine why this was left out of the improvement estimate put up by Mr Nagarwakar; there is ground practically at weir level on the right flank and if there was an discharge a nala would form at once and soon empty the tank.

No. 4. Very urgently required; should certain be carried out before this monsoon. I have this work to urge that I have ordered it to be carried out at once the Contractor agreeing to take payment next official y. If you object to this please order me to stop it. The Executive Engineer has entered in Sinn Rs 250 for this work which I have rais to Rs 800 as I a really good job should be m and this will require resetting a considera area of revetment with a really workl tight packing of clay and gravel.

The work done on the sanctioned estimate is good of its sort but I do not consider C plaster toned on weirs I think Portland Cem should be used unless really good. Surki Mortar can be got and this I don't think is on a small job where it is not worth bringi

I am afraid I can foresee no

but trouble from the fresh channel Scheme
it is bound to silt up in a year or two. The spoil
from it has not been turfed and even whilst
a berm wide enough for a cart track it will
bind its way back to the channel at once.

"Coby"

W. Simpson
for Deputy Chief Engineer
of Navy

ending with letter no
3077 dated the 10th May 1906,
from the Chief Engineer, in
original.

Order:- No: 5803-5 Dy 19.6.06
Mur 2:30-94 Enc/4

The annicut across Cauk belonging to
the Sri Chennakesavaswami
temple at Channapatnam
was restored in 1897
at a cost of Rs 22833.
The weir thereof having
breached in 1898, estimates
amounting in all to Rs 18598
& were sanctioned for
carrying out the necessary
repairs. These estimates
provided for constructing
an anicut with a regulator,
opening out a feeder

to

the tank, the reconstruction of the old weirs, and forming up training bank to prevent the encroachment gardens of the Dasmur village from being inundated; but they did not provide for earth work.

2. It is now stated by the Chief Engineer that the works are nearing completion, and that to bring the bund to a standard of safety, the following works are required:-

(1) Bringing earth-work of bund to standard

(2) Resetting bow

settled portions of revetment,

(3) Raising a right flank bund to same level as main bund, and (4) repairing sluices, which are reported to be leaky.

It is also stated that the nature of the soil requires the dismantling of portions of the bund from time to time.

3 The present estimate for Rs 5359 is accordingly sanctioned, the charge being met from the savings of the Sri Chamarajeswaraswami temple.

temple at Chamarajapuram. The Comptroller to Govt is requested to place the amount at the disposal of the Chief Engineer.

4. The Dy Commr of the Mysore District is requested to enforce strictly the liability of raiyats holding lands under the tank, to maintain the bund after restoration, as already directed in Government Order No 562-4 dated the 3rd August 1904, while allowing them at the same time to cut and remove the grass growing on the inner slopes of the bund

Proceedings of the Government of H. H. the Maharaja of Mysore,

M U Z R A I.

Read the following:-

(1) Government Proceedings No.5148-50 dated 10th May 1906 sanctioning a revised estimate for Rs.1859/- for the repairs of the tank in the Inam Ummathur village, belonging to the Sre -- Chamarajeswaraswami temple at Chamarajanagar.

(11) Government Proceedings No.5803-5 dated 19th June 1906 sanctioning a supplemental estimate for Rs.535/- for restoring the bund of the tank.

(111) Government Proceedings No.3219-21 dated 20th December 1906 sanctioning a 2nd supplimental estimate for Rs.563/- for t usual establishment and Tools and Plant charges.

Also:-

Letters Nos,1848 and 2846 dated 13th March and 19th - April 1907 from the Chief Engineer of Mysore, forwarding again two supplemental estimates amounting to Rs.2823/- .

Order thereon No. 55/2-4 Dated Bangalore 23rd May 1907.

The Chief Engineer has forwarded again 2 supplemen... estimates amounting to Rs.2823/- (1) for Rs2003 for repairing - the damages caused by floods to the feeder channel and head wor of the tank and for increasing the water way of the nala above

and below the anikat and (11) for constructing a cart/ bridge across the feeder channel of the tank. He states that these wor are necessary and that the cost of one of the estimates Viz Rs. 820/- for constructing a cart/ bridge will under the standing order of P.W.Department, have to be borne jointly by the temple and the ryots of the Iraq village as the bridge is intended for the convenience of the ryots to get to their fields.

2. The 2 supplimental estimates for Rs.28 2/- are accordingly sanctioned. The charge being met as follows:-

Rs.2413-0-0 from the funds of the Sre Chamarajesvaraswami temple.

Rs.410-0-0 from the contribution to be levied from the ryots of the village.

3. The Deputy Commissioner is requested to recover from the ryots the sum of Rs410/- being the moiety of the estimated cost of the construction of the cart bridge and credit it to the P.W.

4. The Comptroller is requested to place at the disposal of the P.W.D. the sum of Rs2413 which is sanctioned from the temple funds.

The Chief Engineer is requested to complete the works as early as possible. It is hoped that the requirements of this tank have been fully satisfied.
